Healthcare Industry Veteran Joins WebCareHealth Board

January 29, 2019 (ANKENY) -- Today WebCareHealth (WCH) is pleased to announce that Thomas E. Press has been elected to the company's board of directors. As an organization focused on developing technology to yield positive health outcomes, WCH is excited to leverage Press' ability to assist in executing its strategy.

Press joins WCH with forty years of leadership experience in developing and operating managed care organizations, resolving conflicts, seizing market opportunities, and facilitating strategic relationships among physicians, hospitals, insurers and employers. He's worked for large healthcare and health insurance organizations like Midlands Choice, Catholic Health Initiatives and Blue Cross and Blue Shield of Iowa. Through his private consulting company, Press has also worked with Iowa Health System, Mercy Health Network, SecureCare of Iowa and the Iowa Hospital Association.

Press commented, "In my experience, the most successful healthcare or healthcare-related organizations are those that are driven by people of passion for the work and vision for the future. I recognized those qualities right away when talking to the WebCareHealth team. For me, joining the company board of directors was an easy decision."

In his role as a member of the board of directors, Press will help make strategic decisions about how and where WCH will grow, as well as offer council on key healthcare trends. Press will join Scott Hoekman of Next Level Ventures, Dr. Scott Yegge, WCH Co-Founder, and Dr. Teresa Sieck, WCH Co-Founder.

In reflecting upon Press' addition to the WCH board of directors, Dr. Yegge, Board Chariman, said, "When you're a small company, it's important to bring in leaders who not only offer experience and expertise, but also share our vision for the future of healthcare. Press has demonstrated that he's fully invested in our belief that connecting Patients with Providers thru remote monitoring technologies will lower costs in delivering care, increase patient satisfaction and improve outcomes."

About WebCareHealth: Founded in 2014 WCH develops innovative cloud-based software solutions that enable healthcare providers to remotely monitor the health of patients managing chronic illnesses including heart failure and diabetes. More than 4,000 such patients receive close monitoring and care through WCH's partnership with 20 healthcare systems representing 78 facilities across the U.S.
